

“Never let your past experiences harm your future, your past cannot be altered and your future doesn’t deserve the punishment” - A statement that perfectly defines my situation. I yearn for a master’s degree in **Industrial Engineering**, albeit my ordinary academic achievements. I firmly believe pursuing masters at your revered university can make my professional aspirations breeze.

My father was a son of a farmer and he knew the value of good education, thus, he worked hard to provide me best of what he could. My mother contributed for our livelihood. Coming from such background the value for education was taught to me at a very young age. I did several odd jobs when I was in school not just to earn money but also to make use of time effectively between education and work. Despite all odds I fared very well at my 10th grade academically. That success at young age conjured in my mind turned the reason for my nemesis at academics.

As the financial situation at home directly triggered my comfort zone and pushed my attention towards fun elements than essential elements. The situation at home aroused by social status in the society was to harm further. I used to often play out in the ground with the new acquired friends than studying or preparing for exams and that lead to my poor performance in 12th grade and that affected my confidence. My parents and some well-wishers introduced me to a wonderful college in the town and encouraged me to pursue Mechanical Engineering over other streams.

Right from first day of my college I started having preferences over the subjects that were taught in the college. I started doing very good with the subjects that I personally liked like CAE, drawing, CAM and Basic electronics. I thoroughly started enjoying the subjects that were taught to us in practical manner. In the subsequent years I also loved the subjects

that were later introduced like Kinematics of Machines, Fluid Mechanics, Mechanical Measurements, Manufacturing process, Energy Engineering, Mechatronics and Micro processor, CIM and Automation lab. Highly dignified professors taught some of the aforementioned subjects and made sure that every student in the class do understand the concepts clearly and also love the subjects unconditionally.

One such Professor was Mr. Raghu HS, under his guidance we did things that seemed impossible for us. He encouraged us and mentored us in right path and he also agreed to let me assist him on his research on Power generation from SI engine exhaust using turbine. Another Professor who played a pivotal role in my life was Dr. Dhananjaya (HOD) who not just used to teach us subjects that were of his expertise, he used to constantly motivate all his students to step out of their comfort zone. He encouraged every student with equal enthusiasm and never practiced partiality.

Even today after completion of my under graduation I reach out to my HOD to seek guidance and he provides right solutions every time. After graduating from a Tier 3 city in India with average scores I coveted international masters and that seemed a very intimidating task, I went to him to seek guidance pertaining to university and course selection and he refused. He instead helped me to self discover my true passion and let me fly my way.

With tons of research online, hours of discussion with friends, seniors and well-wishers, I found that Masters in **Industrial Engineering** would be ideal choice for my future goals. And, your revered university offers exactly that course with very good faculty and exceptional research work. At **National University of Ireland**, I believe I would be given an opportunity to make my future better and do well for my family, society and country at large.
